

11th June 2015

To whom it may concern,

Genetracer Biotech

I am a clinical research fellow with interests in laboratory diagnosis and treatment of inherited metabolic diseases. I had an excellent experience working with Genetracer Biotech on exome sequencing in a patient with an unidentified disease. The company provided a swift as well as high quality customised service using Ion Proton, Life technologies Thermo-Fisher Scientific platform. The team was able to identify a genetic variant of high clinical significance.

The results were delivered in three weeks and supported with a detailed report on the samples and the tests. The company showed good understanding of clinical sensitivity and conducted meticulous high throughput exome analysis employing robust bioinformatics tools.

We are pleased with the results of the analysis and would be happy to use Genetracer Biotech's service in future diagnostic and research studies.

Yours faithfully,

Elena Pavlova
