To whom it may concern

17/06/15

It is my distinct pleasure to write a letter about Genetracer Biotech based on our experience with services provided by this company.

I am currently Professor of Pharmacology at the University of the Basque Country UPV/EHU, Spain being the head of Neuropsychopharmacology group of this institution. Complementary, we are members of the traslational research center in Psychiatry CIBERSAM. Our research topic is the neurobiology of mental disorders and the development of new therapeutic strategies by using molecular approaches. We use a number of techniques applied to human brain and peripheral tissues. Genetracer Biotech provided us customized services of gene expression in a large number of samples with high quality and personalized support. Results were delivered in a short period and were presented with extensive detail. The company Genetracer Biotech gained knowledge of the field and subsequently carried out informative reports on the topic describing new technical possibilities under development.

Team members of Genetracer Biotech have demonstrated us knowledge in the exciting area of the exome sequencing coupled with the mastery of many techniques, which are imperative in our area of research.

In consequence, we plan to continue the use of Genetracer Biotech services in our future research activities.

Yours sincerely

Fdo.: Dr. J. Javier Meana
