To whom it may concern

I am a bioinformatic research and head of bioinformatic CIBERehd platform with special interests in Next-Generation Sequencing analysis. I had an excellent experience working with Genetracer Biotech on Ampliseq Transcriptome Human Gene Panel with RNA samples from urine, formalin fixed paraffin embedded and laser capture microdissection. The company provided a fast and cost-effective service using Ion Proton, Life Technologies platform. The team was able to support the development of the project and delivery the results in less than three weeks.

I am pleased with the results of the analysis and would be happy to use Genetracer Biotech service in future DEG analysis and research studies.

Yours faithfully,

Juanjo Lozano PhD
