To whom it may concern:

It is a pleasure to write a letter of reference regarding Genetracer Biotech sequencing services.

I am the principal investigator of the Liver Fibrosis Lab at IDIBAPS. We have had the pleasure of working with Genetracer Biotech to perform a differential gene expression (DEG) analysis of RNA-seq with the Ampliseq Transcriptome Human Gene Panel. The analysis was performed with a minimum amount of RNA from valuable human samples obtained from laser capture microdissection of paraffin embedded liver tissue.

I am pleased with our choice to trust in the Genetracer Biotech services. The company provided a fast and cost-effective service using Ion Proton, Life Technologies platform. The Genetracer Biotech team was able to identify project requirements, have a good communication with the project leader and support and develop a fast programme of delivery.

I am pleased with the results of the analysis and would be happy to recommend or use Genetracer Biotech service in future DEG analysis and research studies.

Sincerely,

Pau Sancho-Bru, PhD
